Visit ID : MPR46254	Registration	: 12/Sep/2021 04:25PM
UHID/MR No : APR4.000005934	Collected	: 12/Sep/2021 07:05AM
Patient Name : Mrs. Vikas	Received	: 12/Sep/2021 07:42AM
Age/Gender : 28 Y 0 M 0 D /F	Reported	: 13/Sep/2021 10:48AM
Ref Doctor : SELF	Status	: Final Report
Client Name : NORTH EAST HEALTHCARE PVT LTD	Client Code	: 2802
Client Add : Golf course	Barcode No	: a2004524

DEPARTMENT OF MOLECULAR MICROBIOLOGY

Test Name	Result	Unit	Bio. Ref. Range	Method
-----------	--------	------	-----------------	--------

COVID-19 VIRUS QUALITATIVE PCR

Sample Type : NASOPHARYNGEAL / OROPHARYNGEAL SWAB

COVID-19 Virus QUALITATIVE RT-PCR	NEGATIVE			
-----------------------------------	----------	--	--	--

INTERPRETATION:

RESULT	REMARKS
Positive	RNA Specific to SARS-CoV-2 Detected
Negative	RNA Specific to SARS-CoV-2 Not detected
Inconclusive	A repeat sample is required for confirmation

NOTE:

1. Internal Control, Negative Control & Positive Control are used in each assay.
2. Limit of detection of the assay is 100 RNA copies/reaction.
3. Negative result does not rule out the possibility of 2019-nCoV Infection. Presence of inhibitors, mutations & insufficient organism RNA can influence the result.
4. 2019-nCoV test is conducted on the kit approved by ICMR / CE-IVD / US-FDA.
5. Kindly consult referring Physician / Authorized hospital for appropriate follow up.
6. This is a qualitative test. The Ct values do not provide a measure of viral load due to inherent variability in sampling and kits. As per ICMR guidelines, it is not recommended to rely on numerical Ct values for determining infectiousness of COVID-19 patients and deciding patient management protocols.

https://www.icmr.gov.in/pdf/covid/techdoc/Advisory_on_correlation_of_COVID_severity_with_Ct_values.pdf

COMMENTS:

Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). 2019-nCoV is a new strain that was discovered in 2019 and has not been previously identified in humans. Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome and kidney failure.

(ICMR Registration number for 2019-nCoV - MDRCG001)

Test Performed at: 363-364/4, New Railway Road, Gurugram, 12001, Haryana.
